DIGITAL OPERATIONS PROPOSAL

One place for requests, purchase orders, timesheets and tasks

A working prototype and a phased digital operations proposal

Briefing for Nisla Naay · November 2026

Prepared by Andalib Olee

OVERVIEW

This briefing

01 **The proposal in one minute** — Slides 3
What changes and the estimated effect

02 **Timesheets, time off and people** — Slides 4–7
Timesheets, time off, onboarding and offboarding

03 **Requests and purchase orders** — Slides 8–12
Five request types, approval routes and POs

04 **Tasks, self-service and training** — Slides 13–16
My Tasks, staff self-service, certificates, How-to guides

05 **Control and governance** — Slides 17–20
Admin time, audit trail, independence, security

06 **Pricing, timeline and next steps** — Slides 21–22
Software estimate, the path to a pilot and next steps

The proposal in one minute

Today, requests, purchase orders and timesheets rely on paper and PDF forms, signatures, scans and email. Tasks have no shared workspace. The proposal brings all four into one system, with approvals and status recorded centrally.

≈ 1/3

of the admin task time: a request, purchase order or timesheet takes about one third of the time it takes today

≈ 1,400 h

estimated admin capacity recovered per year, per 100 staff

≈ 8 weeks

planning target from discovery through a controlled pilot; rollout is separate

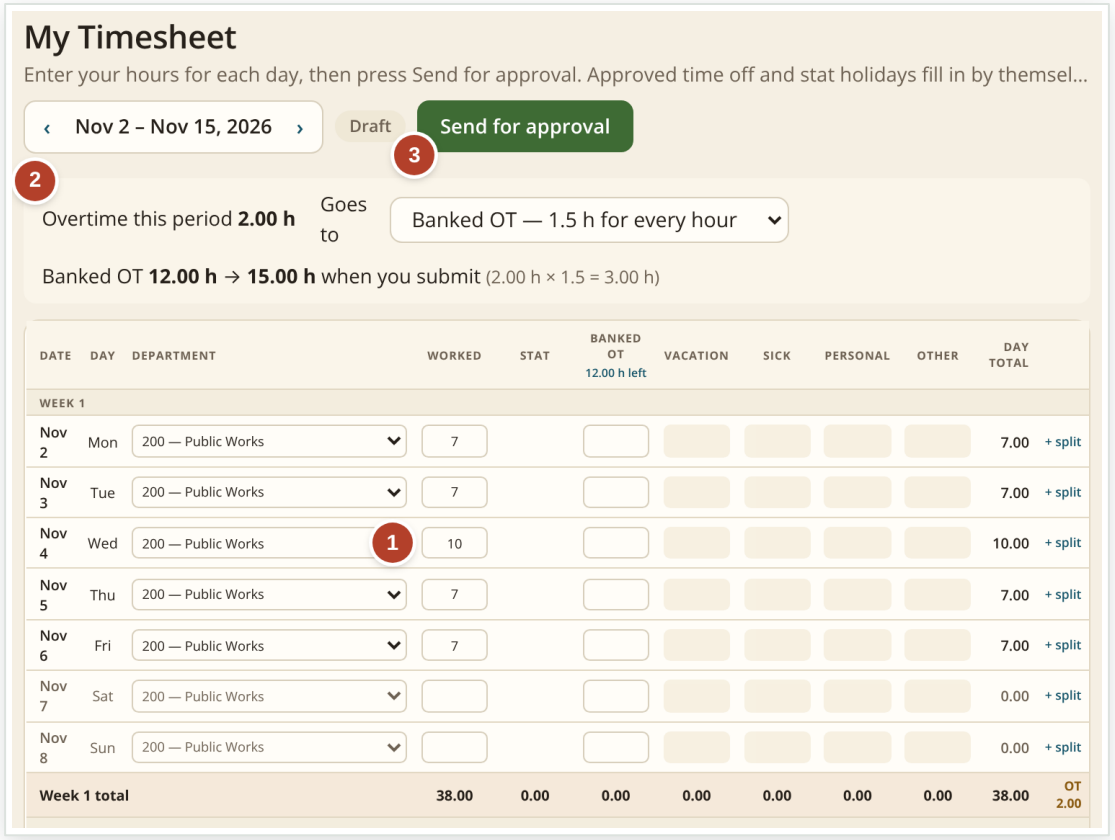

One shared platform

for requests, purchase orders, timesheets and tasks

How these were estimated

- Illustrative organization of 100 staff: 2,600 timesheets a year (one per employee every two weeks), about 600 requests and 240 purchase orders.
- Assumed admin time today: a 90-minute midpoint for each request or purchase order and about 20 minutes for each timesheet. The proposed workflow is estimated at about one third of that time.
- These volumes and processing times are planning assumptions. Validate Nisla Naay's actual counts and baseline during discovery. Pricing is summarized on slide 21.

Timesheets: type the hours, the system does the math

Screen: My Timesheet, as an employee sees it.

Today: a paper or spreadsheet timesheet, signed, scanned and emailed. Overtime and banked time are counted by hand.

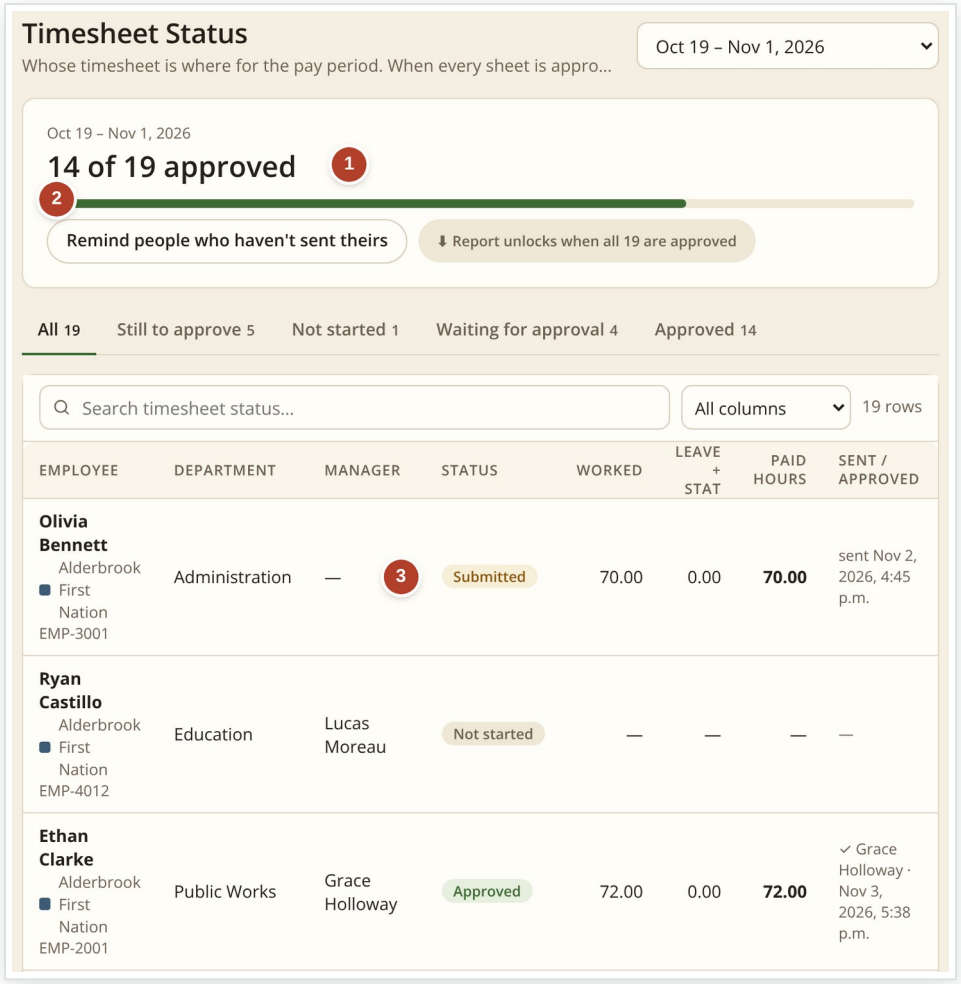

1. **Type the hours for each day**
   Here a 10-hour Wednesday among 7-hour days.

2. **Overtime is worked out for you**
   Overtime uses Nisla Naay-approved rules. The banked-time balance updates automatically.

3. **One button sends it for approval**
   The supervisor approves it on screen. No paper, no scan.

> Overtime thresholds, multipliers and leave calculations must be configured to approved Nisla Naay policy and tested before launch.

One page shows who has not sent a timesheet

Screen: Time & Attendance › By pay period.

1 **Progress for the pay period**
How many timesheets are approved.

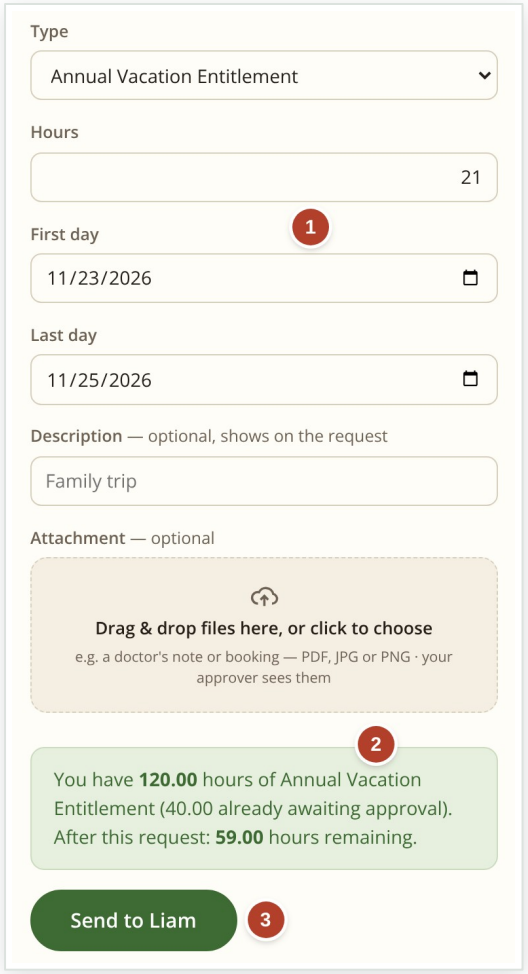

2 **One button reminds the rest**
No chasing by email or phone.

3 **Each person's status**
Not started, submitted or approved.

	TODAY	NEW SYSTEM
Steps people do	5	2
Time per timesheet	≈ 20 min	≈ 7 min
Overtime, banked time	by hand	automatic
Chasing late ones	one by one	one button

Estimates for an illustrative organization of 100 staff; how they were estimated is on slide 3.

Time off: one short form instead of a PDF and an email

Screen: My Time Off.

Today: a PDF form is filled in, signed and emailed, and the balance is checked by asking.

	TODAY	NEW SYSTEM
How it is asked	PDF + email	one form
Balance left	ask HR	shown first
On the timesheet	typed again	fills itself

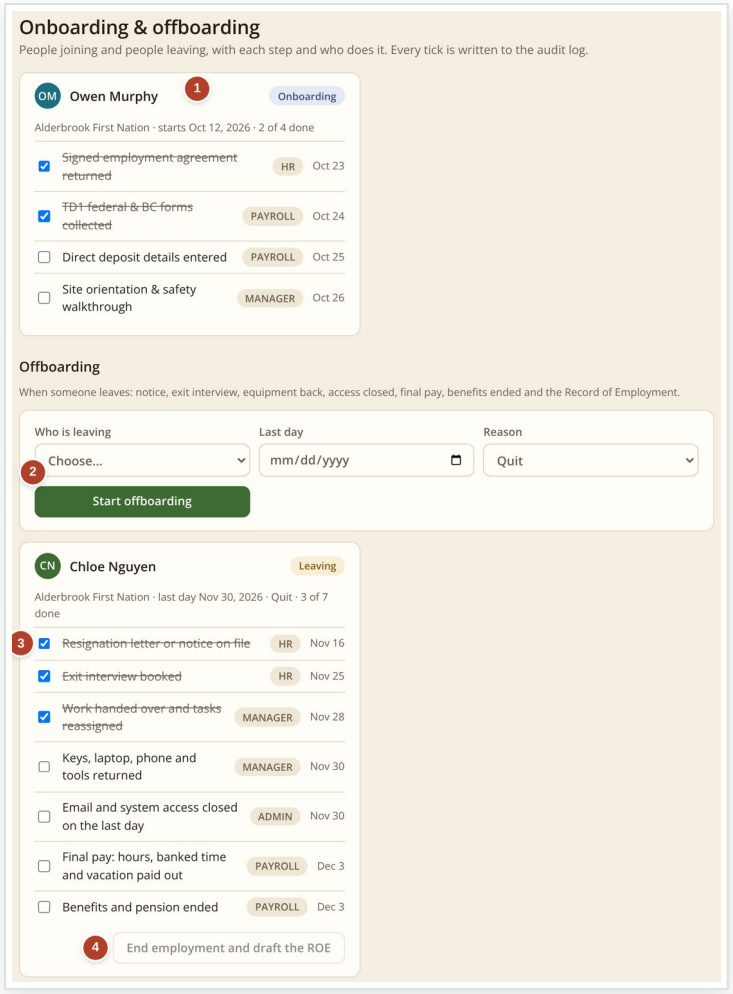

1 Pick the type and the days
The hours are worked out for you.

2 See what is left first
The balance after this request, before it is sent.

3 One button sends it
It goes straight to the supervisor.

4 Follow the status
Who has it, and when it is approved.

Onboarding and offboarding: every step, nothing missed

Screen: People › Onboarding & offboarding.

1 New starter checklist
Agreement, tax forms, direct deposit and orientation, each with who does it and when.

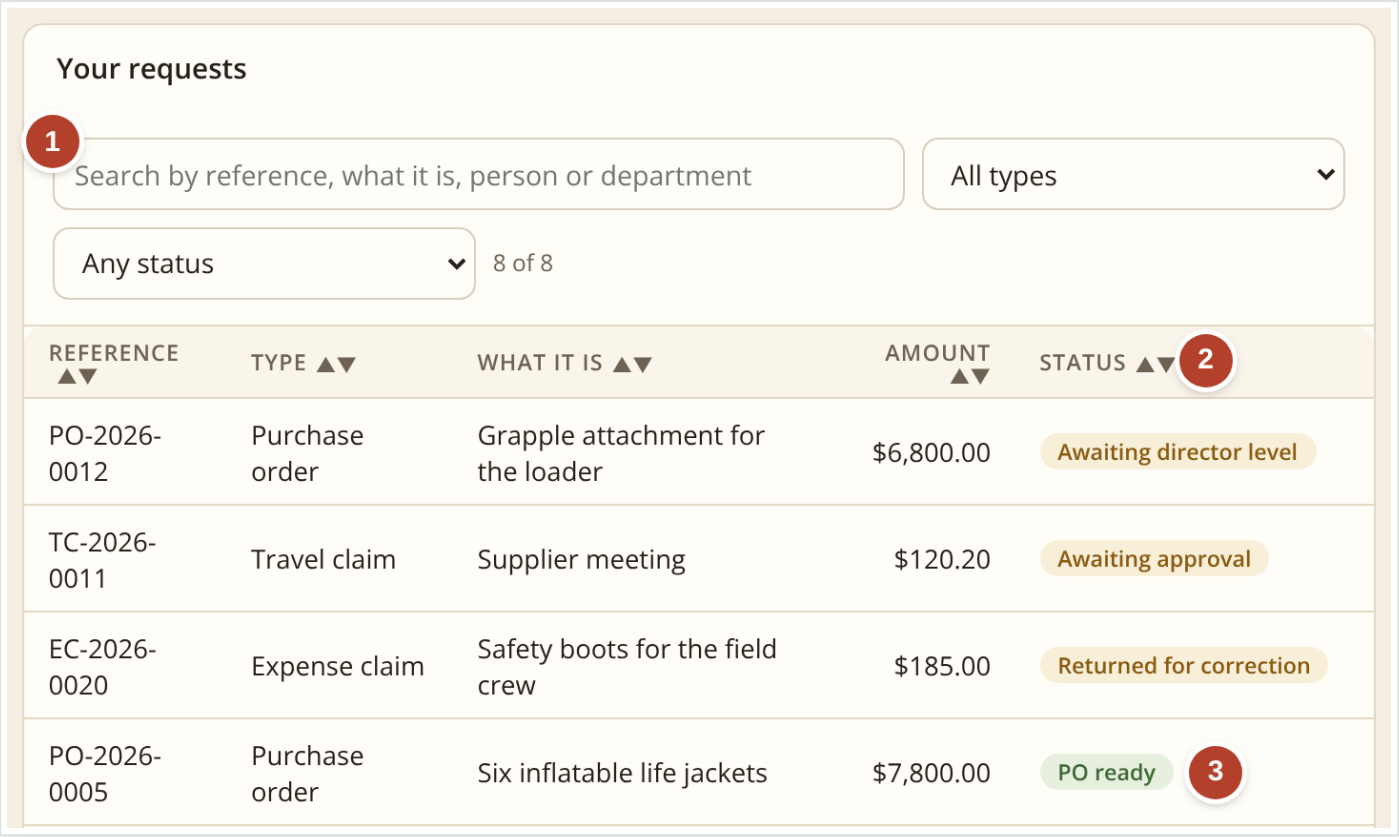

2 Start an offboarding
Pick the person, the last day and the reason. The checklist is assigned at once.

3 Leaving checklist
Notice, exit interview, work handed over, keys and equipment back, access closed, final pay, benefits ended.

4 Close the checklist
When every step is complete, HR reviews and closes the checklist. Payroll prepares and validates the Record of Employment through the approved process.

Today: paper checklists and emails between HR, the manager, IT and Payroll, and steps such as returning keys or closing access are easy to miss.

Requests: every type in one place, with its status

Screen: My requests, as an employee sees it.

Today: a paper or PDF form for each type, saved and passed on as an email attachment. To know where one is, you ask around.

1 **Find any request in seconds**
Search by number, person, department or what it was for.

2 **See where it stands right now**
Awaiting approval, awaiting director level, returned to you, or ready.

3 **A searchable record**
Each request stays on a numbered list with its status and history, reducing the risk of forms being lost in inboxes or filing trays.

Five request types, one short form each: travel, credit card purchase, travel claim, expense claim and purchase order.

Five kinds of request, each with its files and its history

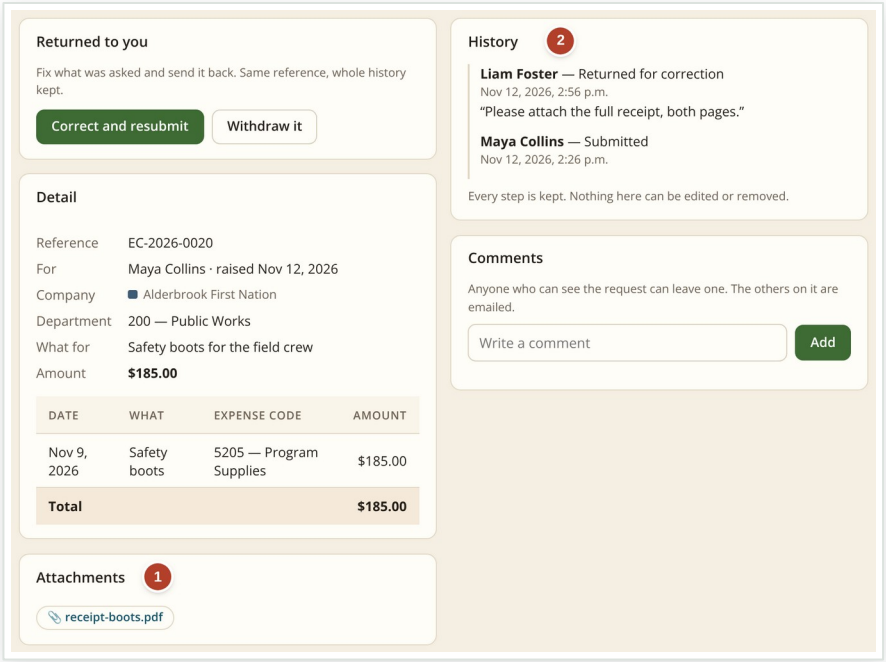

Travel request
Approval before a trip: where, when and the estimated cost.

Credit card purchase
Approval before buying something on the organization's card.

Travel claim
Mileage, meals and other costs after a trip.

Expense claim
Money spent out of pocket, with the receipt.

Purchase order
Approval to order from a supplier.

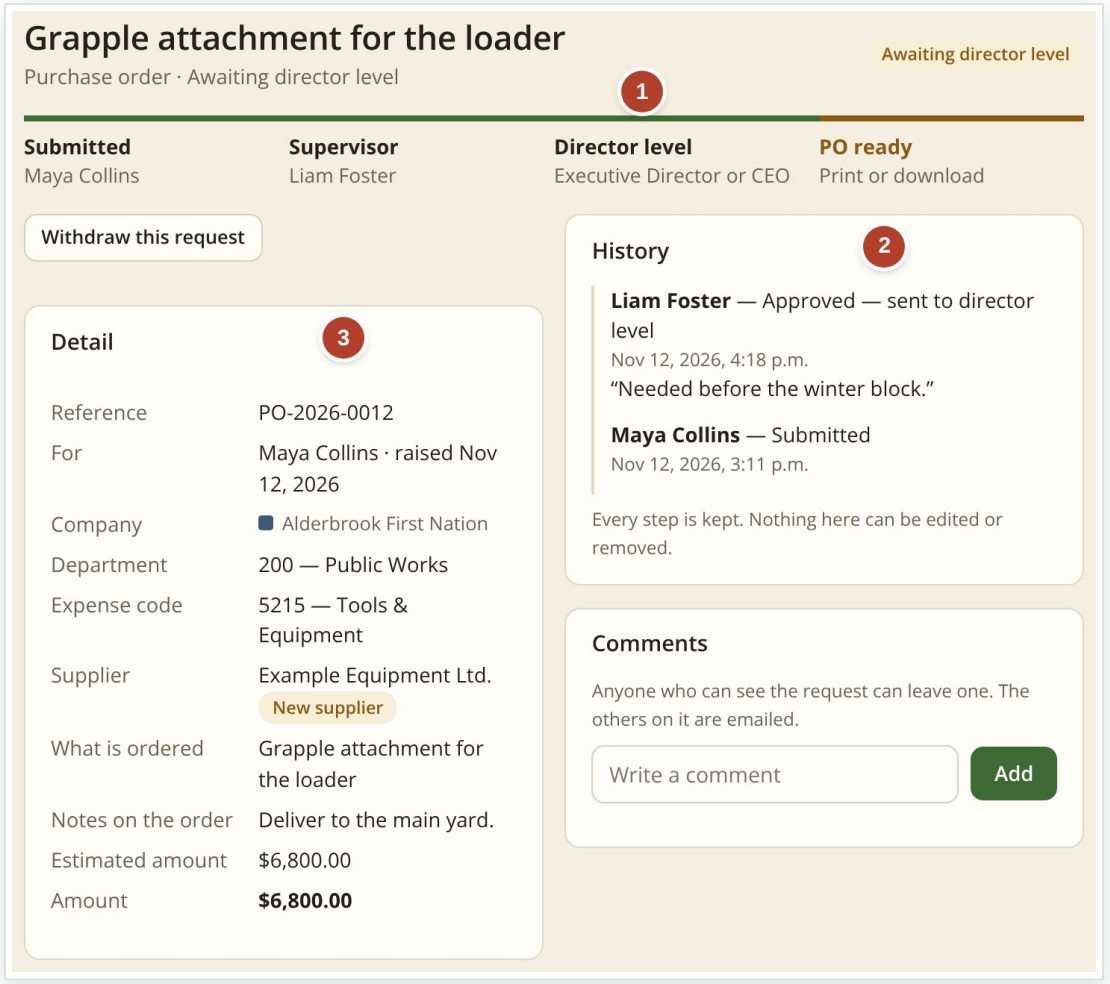

Screen: one expense claim opened.

1 **Files attached**
Receipts, quotes and other files are added while filling in the request. They stay with it.

2 **Its own history**
Who sent it, who approved or returned it, when, and any comment.

A traceable record for every request. The request, attachments and approval events stay together under one number. Permitted corrections are captured as additional history, rather than silently overwriting the record.

A request moves in minutes, and everyone can see it

Screen: one request opened. The bar shows the route.

1 The route
Who has approved and who is next.

2 The history
Each step with name, date and comment.

3 The details
Department and expense code are required.

	TODAY	NEW SYSTEM
Steps people do	6	2
Emails written	≈ 3	0
Time per request	1–2 hours	≈ 30 min
Signatures	hand or e-sign	one click

Estimates for an illustrative organization of 100 staff; how they were estimated is on slide 3.

Today a purchase order travels by paper, scanner and email

TODAY: PAPER, SIGNATURES, SCANNER AND EMAIL

1 A paper PO form is filled in by hand › 2 It is taken round for signatures › 3 Someone scans it › 4 The scan is sent to Finance; the department keeps one copy › 5 Finance stores it on a computer › 6 Later it has to be hunted for. Sometimes it is missing

WITH THE SYSTEM: ONE PLACE

1 It is filled in online › 2 The supervisor approves with one click › 3 Director level approves if it is over $5,000 › 4 The PO is numbered and stays on record

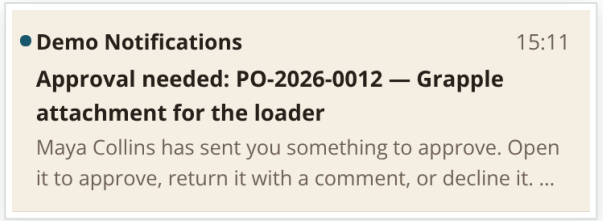

Pages printed

about 3
→ 0

Missing purchase orders

sometimes
→ risk reduced

Nobody writes an email. The system sends the notices itself:

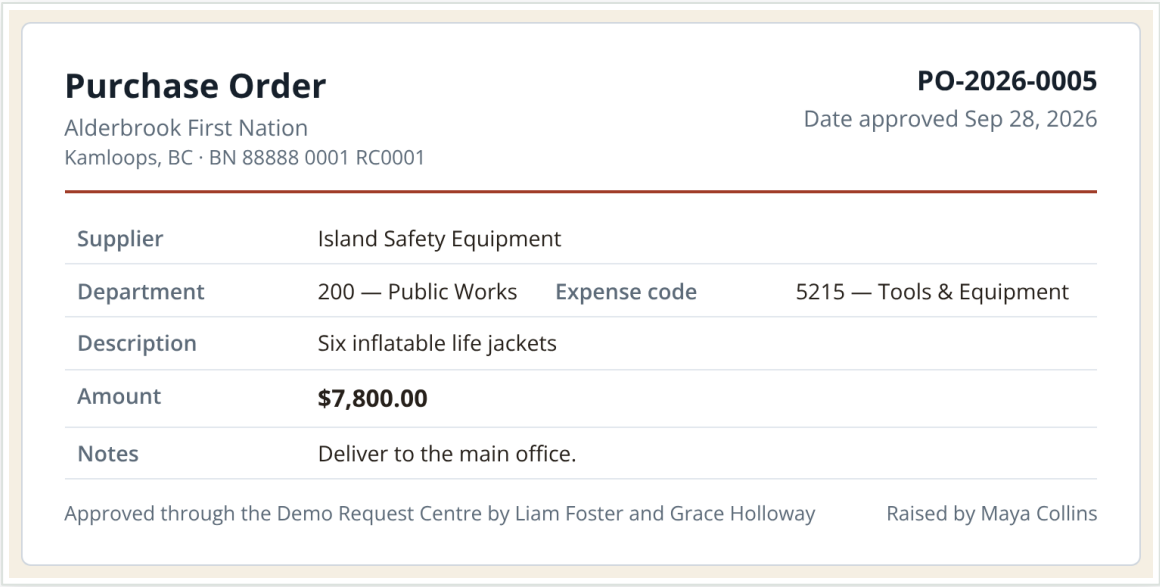

The supervisor receives this

The employee receives this

Purchase order approvals: controlled and traceable

Purchase Order

Alderbrook First Nation
Kamloops, BC · BN 88888 0001 RC0001

PO-2026-0005
Date approved Sep 28, 2026

Supplier	Island Safety Equipment		
Department	200 — Public Works	Expense code	5215 — Tools & Equipment
Description	Six inflatable life jackets		
Amount	**$7,800.00**		
Notes	Deliver to the main office.		

Approved through the Demo Request Centre by Liam Foster and Grace Holloway

Raised by Maya Collins

Screen: the one-page purchase order, ready to print or download as a PDF.

Employee asks	Supervisor approves	Director level if over $5,000	**PO is ready, with its number**

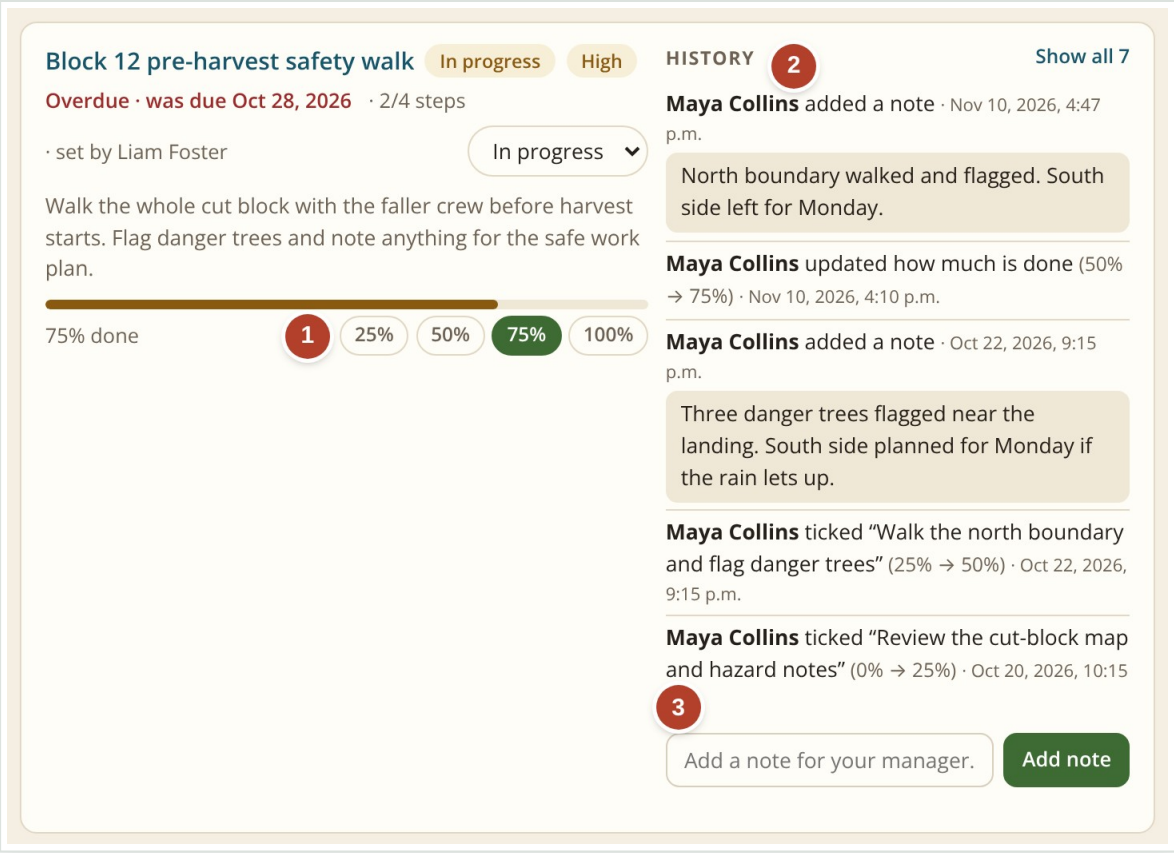

What changes for one purchase order

	TODAY	NEW SYSTEM
Steps people do	8	3
Time per order	1–2 hours	≈ 30 min
Pages printed	≈ 3	0 to 1
PO location	scattered	centralized

The workflow can enforce the configured approval sequence. Self-approval should be blocked, and approved delegation and exception rules must be defined, tested and recorded. The PO should show its approval history.

Estimates for an illustrative organization of 100 staff; how they were estimated is on slide 3.

My Tasks: assigned, tracked and reported in one place

Screen: My Tasks. One task a manager assigned to an employee.

1 Progress with one click
25, 50, 75 or 100 percent.

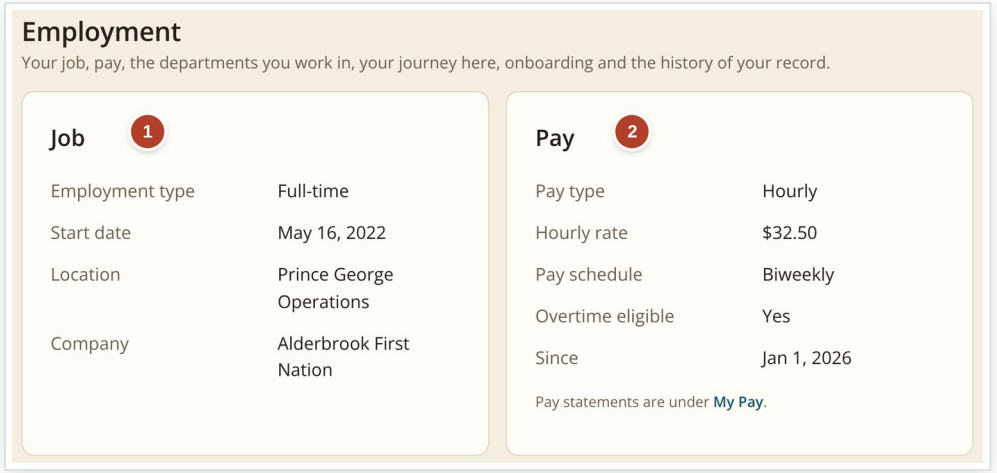

2 The history
Who did what, and when.

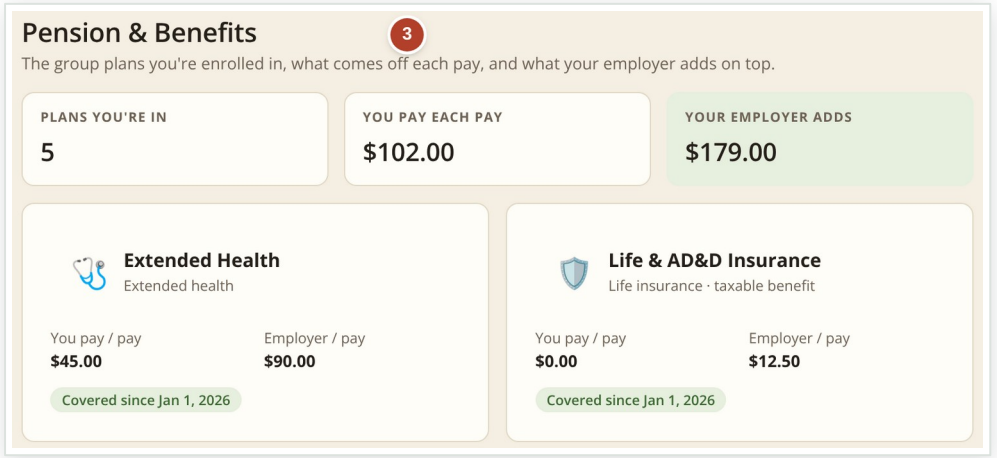

3 A note for the manager
It replaces the status email.

Today: nothing like this. Tasks are given by email or in a meeting, and progress is found out by asking.

A streamlined workflow and more productive teams. Everyone sees what is assigned, what is late and what is done.

Staff check their own pay, job details and benefits

Screens: My Profile › Employment and Pension & Benefits, as an employee sees them.

1 **Employment details**
Start date, position, location and who they report to.

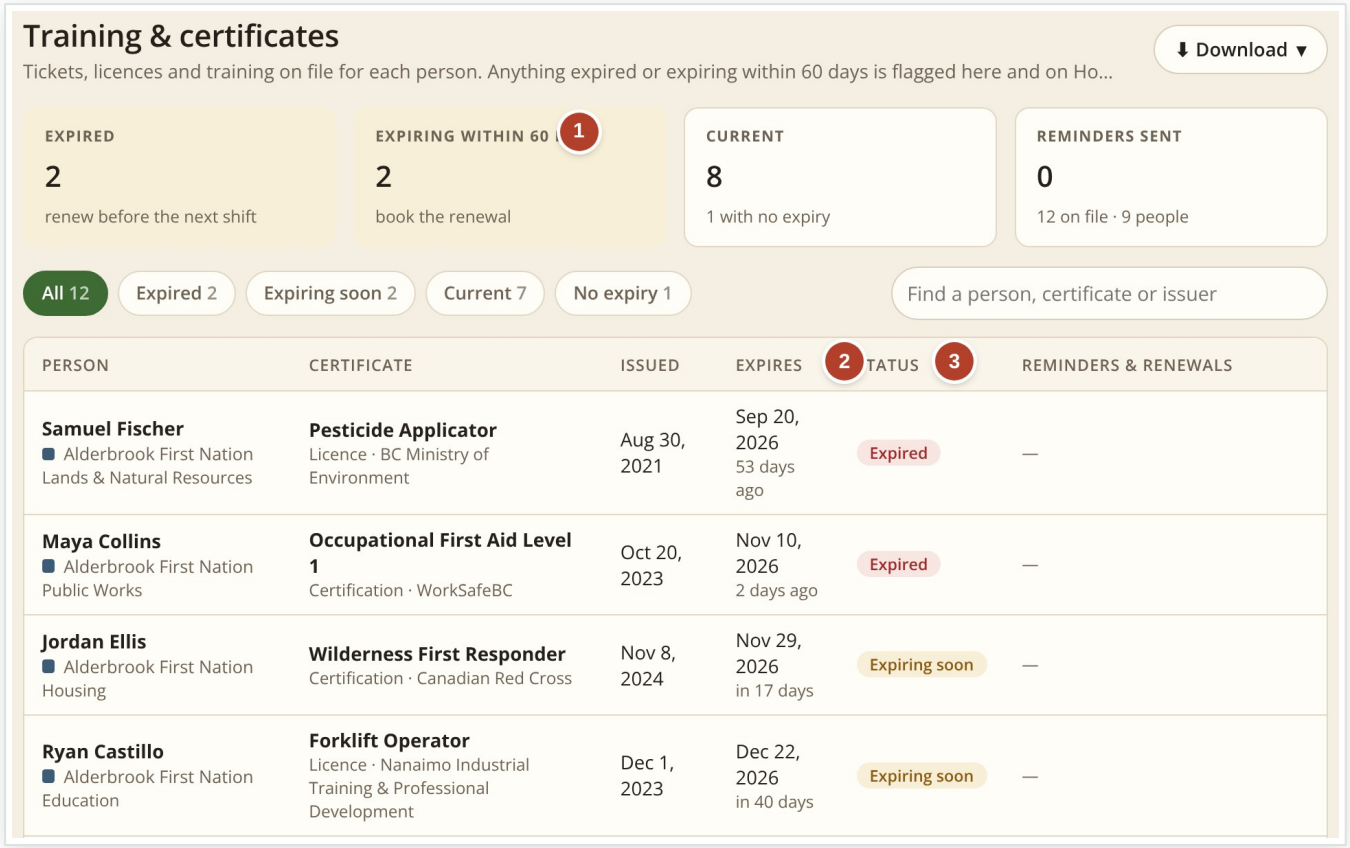

2 **Pay details**
Pay rate, pay schedule and every pay statement, the moment it is ready.

3 **Pension and benefits**
The plans they are in, what comes off each pay and what the employer adds.

Today: an email to Finance or HR, then a wait for someone to look it up and reply.

With the system: employees can view the records permitted by their role once access rules and payroll/benefits data connections have been configured and tested.

Certificates: expiry dates tracked for managers and HR

Screen: People › Certificates, as a manager sees it.

Today: expiry dates sit in files and spreadsheets, and a lapsed certificate is often noticed only after it has expired.

1. **What needs attention**
   Expired, and expiring within 60 days.

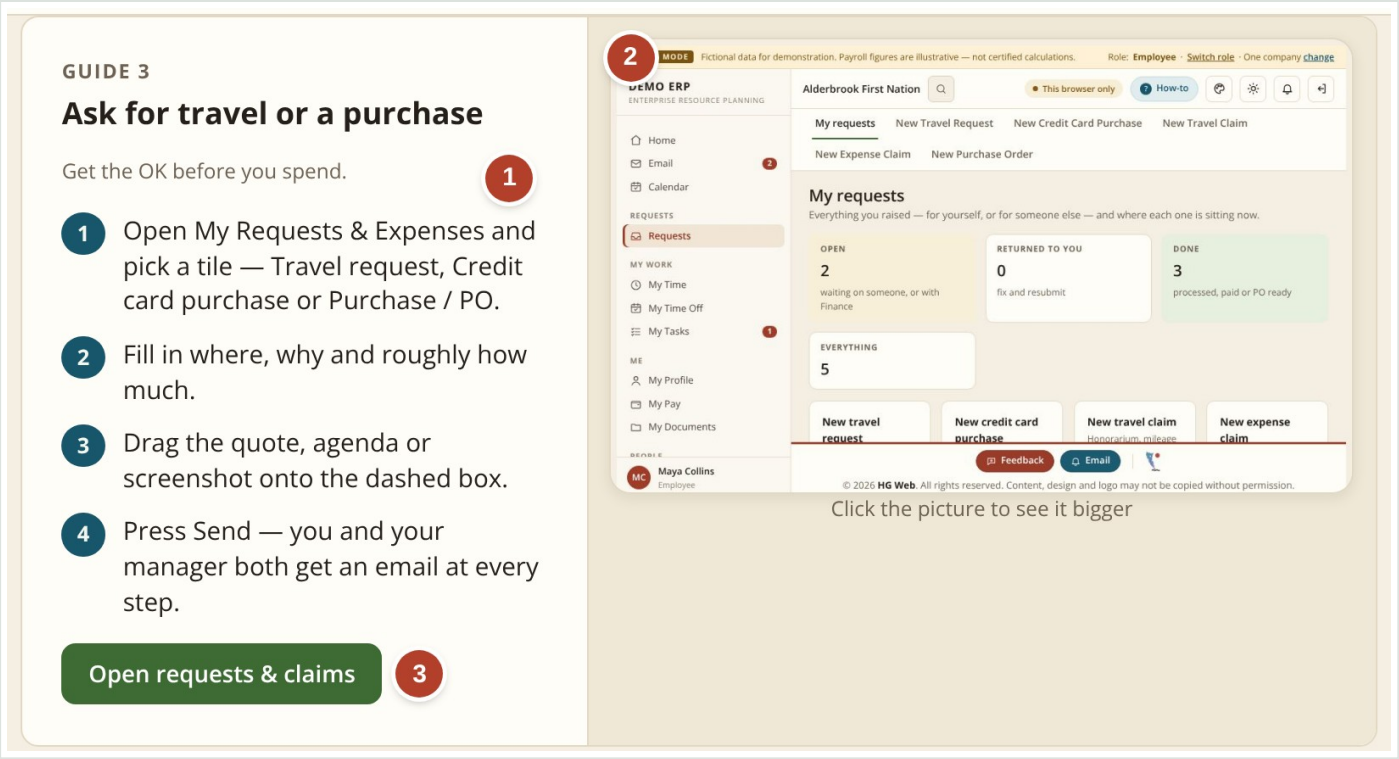

2. **The expiry date**
   With the days left for each one.

3. **A clear status**
   Expired, expiring soon or current.

	TODAY	NEW SYSTEM
Finding a date	look it up	one list
Early warning	none	60 days
Reminders	by hand	one click

Managers see their own team. HR sees everyone, adds certificates and sends reminders.

Built-in How-to guides: target faster staff onboarding

Click the picture to see it bigger

Screen: How-to guides. One guide, as a new employee sees it.

Today: a new employee often learns forms and processes by asking colleagues; the current 2–3 month estimate should be validated with managers.

1. **The proper procedure, step by step**
   Written in plain words, the same for everyone.

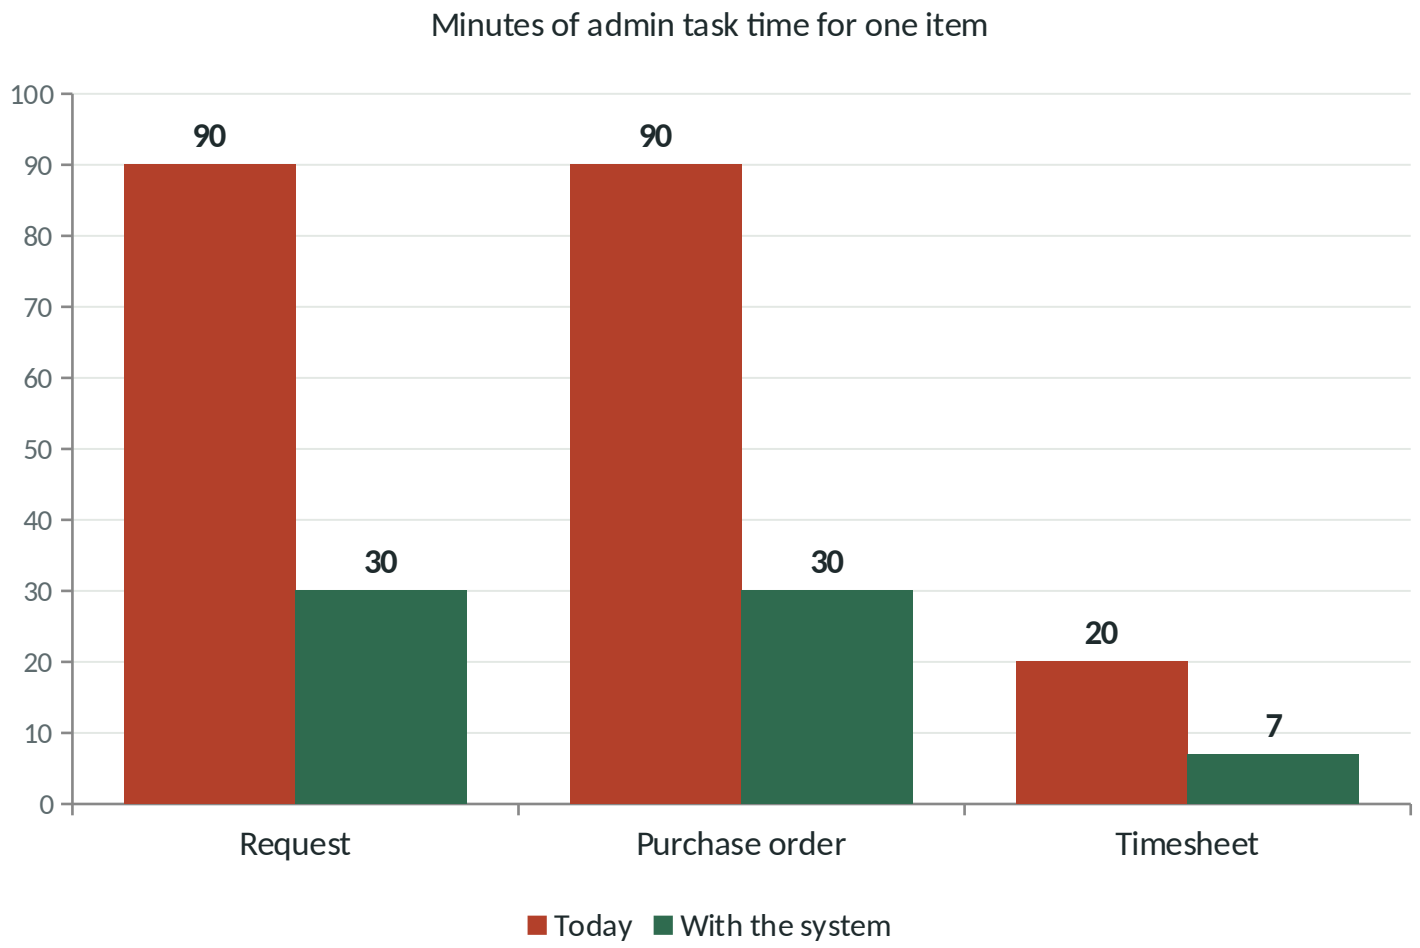

2. **A picture of the real screen**
   So people know what to look for.

3. **One button opens the page**
   Read the steps, then do the job.

	TODAY	NEW SYSTEM
Training a new hire	2–3 months	2-week target
How people learn	ask around	follow guide
Guides by role	none	built in

Training times are planning estimates; the two-week figure is a target to test during the pilot.

Illustrative administrative-time estimate: about one third

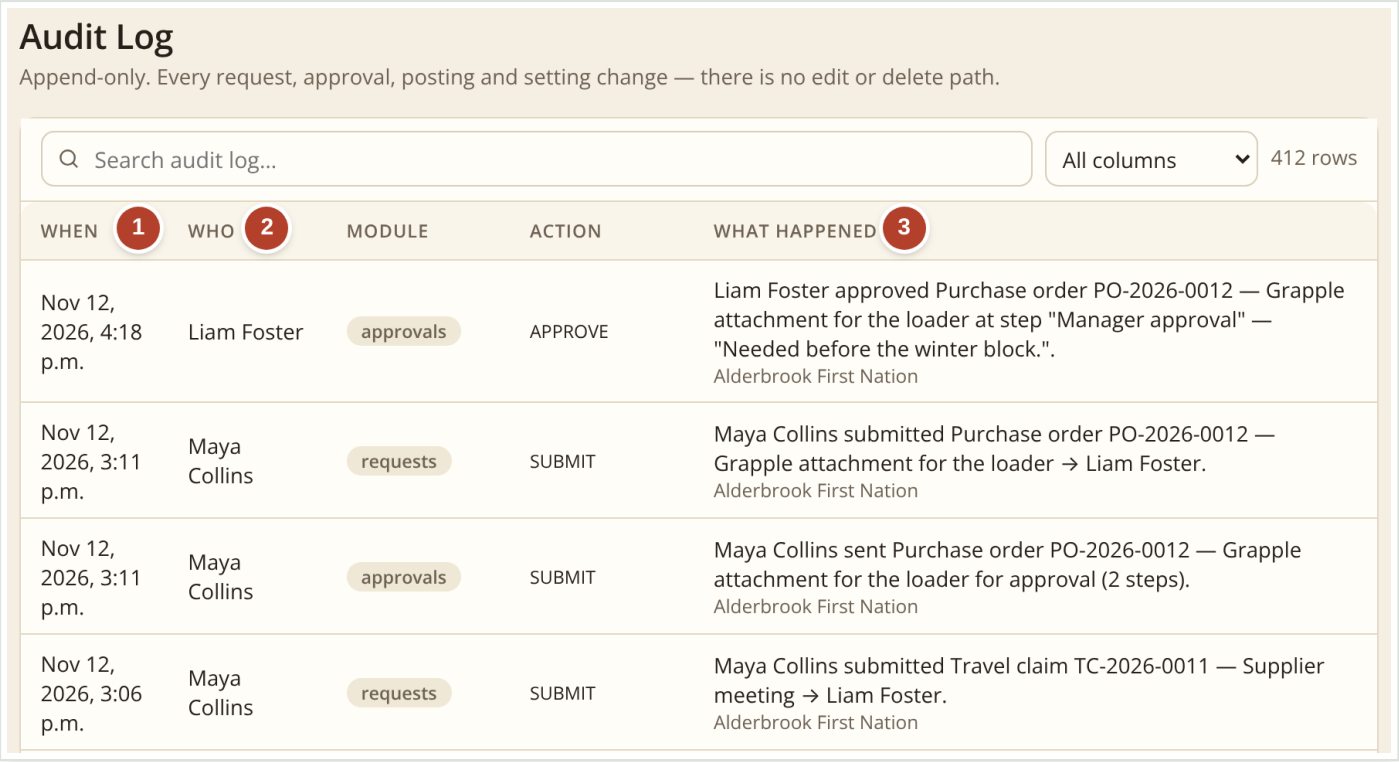

Where the time goes today

- Filling in paper forms or editing PDFs, and collecting signatures.
- Scanning and emailing the signed copy.
- Hunting for a form or PO that cannot be found.
- Counting overtime, banked time and leave by hand.

> The system removes these four. It does not remove the decision: a person still approves every item.

Planning estimate for an illustrative 100-staff organization; validate against Nisla Naay baseline data during discovery.

A proper audit trail, kept automatically

Audit Log

Append-only. Every request, approval, posting and setting change — there is no edit or delete path.

Search audit log... | All columns | 412 rows

WHEN 1	WHO 2	MODULE	ACTION	WHAT HAPPENED 3
Nov 12, 2026, 4:18 p.m.	Liam Foster	approvals	APPROVE	Liam Foster approved Purchase order PO-2026-0012 — Grapple attachment for the loader at step "Manager approval" — "Needed before the winter block.". Alderbrook First Nation
Nov 12, 2026, 3:11 p.m.	Maya Collins	requests	SUBMIT	Maya Collins submitted Purchase order PO-2026-0012 — Grapple attachment for the loader → Liam Foster. Alderbrook First Nation
Nov 12, 2026, 3:11 p.m.	Maya Collins	approvals	SUBMIT	Maya Collins sent Purchase order PO-2026-0012 — Grapple attachment for the loader for approval (2 steps). Alderbrook First Nation
Nov 12, 2026, 3:06 p.m.	Maya Collins	requests	SUBMIT	Maya Collins submitted Travel claim TC-2026-0011 — Supplier meeting → Liam Foster. Alderbrook First Nation

Screen: Administration › Audit log. One purchase order, step by step.

Today: the trail is paper forms, scans and emails spread across folders and inboxes. If a PO is missing, so is the proof of its approval. **With the system:** one searchable record, ready for auditors and funders.

1 When
The date and time of every action, written the moment it happens.

2 Who
The person who did it, by name.

3 What happened
In plain words, with the request number, the step and any comment.

Audit history should retain submitted events. Permitted corrections must use controlled actions that create a traceable entry; retention, access and export rules are set with Nisla Naay.

Beyond time saved: independence and less stress

Less dependence on outside apps

Requests, purchase orders, timesheets and tasks live in one system instead of separate tools, spreadsheets and paper forms. Fewer subscriptions, fewer logins.

No dependence on AI

The system runs on fixed, ordinary rules that people set. It needs no AI service to work, and no information is sent to one.

Nisla Naay-controlled data governance

Hosting location, data ownership, export rights, backups, vendor access and retention terms will be agreed with Nisla Naay IT and leadership before implementation.

Less paperwork, less stress

A shared view of status reduces avoidable follow-up, duplicate handling and time spent searching for paperwork.

Data security, privacy and IT governance

These are production-readiness requirements to confirm with Nisla Naay, not claims that every control is already complete in the prototype.

Identity and access

- Nisla Naay-managed sign-in and multi-factor authentication
- Role-based access for employees, managers, HR and Finance
- Timely access changes when staff join, move or leave

Data protection and hosting

- Encryption in transit and at rest
- Confirm Canadian hosting and data-residency requirements
- Encrypted backups with documented restore testing

Records and accountability

- Defined retention, access and export rules
- Traceable submissions, approvals and corrections
- Controlled vendor access and clear responsibilities

Operational readiness

- Patch, vulnerability and security monitoring
- Incident response and support responsibilities
- Recovery targets and tested continuity procedures

PILOT-READINESS GATE Before a pilot, Nisla Naay IT, privacy and records-management leads should review the requirements, assign owners and agree the evidence needed to accept each control.

Software estimate and timeline

Planning estimate; confirm final implementation scope and terms before any commitment.

PROPOSED SYSTEM · MONTHLY

CAD $1,000

a month, starting after deployment to the whole organization

FIRST YEAR

$10,000

10 × $1,000: payments start after the 8-week build and pilot.

EACH YEAR AFTER

$12,000

12 × $1,000 a year.

THREE-YEAR VIEW

$34,000

Software estimate over the first three years.

INCLUDED

Support and changes

48-hour support target subject to contract; configured to the leadership team and employees.

Also worth noting: with forms completed in the system instead of as PDFs, Adobe licence costs could be reduced by about half.

PROPOSED PATH TO A PILOT

WEEKS 1–2
Requirements, baseline and IT/privacy review

WEEKS 3–6
Configuration and implementation

WEEKS 7–8
Controlled pilot in one or two departments

GO / NO-GO
Evaluate results before production rollout

Where we are, and what happens next

Today: a working prototype

Every screen in this briefing can be tried in a browser with fictional people and figures. It is not connected to real staff accounts or production email. Features and integrations will be confirmed during requirements and security review.

Proposed path to pilot

Planning target: 2 weeks discovery and governance review, 4 weeks configuration and build, then a 2-week pilot. Full production deployment follows a separate go/no-go decision.

1. **Validate requirements and baseline**
   Confirm Nisla Naay volumes, current processing times, forms, approval thresholds, overtime and leave rules, and user roles.

2. **Complete IT and privacy review**
   Agree hosting, sign-in and MFA, permissions, backups, recovery, retention, vendor access and data ownership.

3. **Run a controlled pilot**
   Start with one or two departments and purchase orders and timesheets; train users and provide support.

4. **Evaluate before production rollout**
   Measure processing time, approval completeness, record retrieval, user adoption and reliability. Bring results back for a rollout decision.

Decision requested: authorize requirements validation and pilot planning. Production rollout requires a separate approval.
